

As a avid amateur radio operator over 30 years and a avid 160 meter operator over 20 years I am in FULL support of RM-10352. I am a SSB phone operator and CW operator. I FULLY support the 1.800 to 1.843 MHz segment should be reserved for CW and and other narrow modes.

This should reduce the disputes between the SSB and CW operators.

I operate all amateur bands from 1.8MHz to 1.296 GHz. The FCC needs to bring the 160 meter band into the same basic structure as the other bands. Again, the FCC needs to approve RM-10352 as volunteer compliance to the ARRL suggested bandplans has not worked.

I appreciated your time and consideration.
